Digital Literacy Portfolio Project Report

Name: Harshvardhan Tailor

Registration Number: 25BCE10948

Branch: BTech Computer Science and Engineering (core)

Year: First Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 30-03-2026

Introduction

This project was completed for the Digital Literacy course to build important digital skills needed today. As a Student Digital Ambassador, I needed to understand and show how to use digital tools effectively, safely, and responsibly. The project has five tasks, each focusing on a different part of digital literacy, such as awareness, professional online presence, coding platforms, communication etiquette, and cybercrime awareness. Through this project, I looked at different online platforms, created digital resources, and learned how to maintain a responsible digital identity. This portfolio shows my understanding and practical use of digital literacy concepts.

Task 1: Digital Literacy Infographic

In this task, I made a digital literacy awareness infographic using Canva. The infographic serves as a one-page visual guide to help students grasp the idea of digital literacy and its significance. It covered key topics like the definition of digital literacy, helpful tools such as Google Docs and GitHub, safe internet practices, maintaining a professional online presence, and email etiquette.

I arranged the content clearly, using headings, bullet points, and visuals. This made it easy to read and understand. The colors and icons added to the infographic's appeal. I enjoyed organizing the information in a way that was both informative and visually attractive. One challenge was fitting all the content on a single page without making it feel cluttered. Overall, this task boosted my understanding of digital literacy and improved my design and presentation skills.

Task 2: Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. These platforms are key for building a professional digital presence. I use GitHub to store and share my projects, LinkedIn for professional networking, and Kaggle to learn and practice data science and problem-solving skills.

I also made a GitHub profile README to introduce myself. I updated my LinkedIn profile by adding my educational information. This task taught me how to present myself professionally online. I learned that different platforms serve various roles in academics and career growth.

Over the next four years, I plan to regularly update my GitHub with projects, use LinkedIn to connect with professionals and look for internships, and use Kaggle to enhance my technical and analytical skills. This task highlighted the importance of maintaining a strong digital identity.

Task 3: Coding & Collaboration Platforms

In this task, I looked into coding and collaboration platforms. For coding, I practiced on HackerRank and completed a beginner problem. This helped me grasp basic programming concepts and sharpen my problem-solving skills.

For collaboration, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions, including both multiple choice and short answer options. I linked it to Google Sheets to gather and view responses. This process helped me learn how to collect and analyze data effectively.

This task revealed how different digital platforms can aid academic work. Coding sites like HackerRank improve programming skills, while tools like Google Forms and Sheets are excellent for conducting surveys, collecting feedback, and collaborating with others.

Task 4: Email Etiquette & Communication

In this task, I learned how to write professional emails and proper communication etiquette. I drafted two emails—one requesting an extension for an assignment and another expressing interest in a summer internship. Each email had clear subject lines, polite greetings, organized content, and appropriate sign-offs.

I created a checklist of do's and don'ts for responsible social media use. This helped me appreciate the importance of professionalism in online communication.

imagine you are planning a big surprise party for a friend. You send a quick text to the group chat saying: "Don't come tonight." You actually meant that the party was moved to a different house down the street, but you got distracted and forgot to send the second half of the message.

Because of that one short text, everyone stayed home. Your friend walked into a totally empty room, and the whole surprise was ruined. Your friends weren't being mean; they just thought the party was canceled. You felt terrible, and your friend felt forgotten, all because of a half-finished thought.

To fix this, you should have shared the full story in one go. Instead of a short, scary sentence, you could have said: "Don't come to my house tonight—we moved the party to the park!" Adding a simple "party" emoji would also help show that the news was happy, not bad.

Task 5: Cybercrime Awareness

In this task, I studied a cybercrime case involving phishing and identity theft. The case illustrated how fraudsters deceive people into sharing sensitive information like OTPs and banking details through fake messages and websites. This often leads to financial losses and emotional distress for the victims.

I was surprised by how easily people can fall for these scams due to a lack of awareness. These attacks are designed to appear very convincing, making them hard to spot.

As a result of this task, I will be more cautious while using online platforms. I will not click on unknown links, verify sources before sharing information, and never disclose sensitive details like OTPs or passwords. This task increased my awareness of cybersecurity and safe online behavior.

Conclusion

This project helped me build a solid understanding of digital literacy and its significance in today's world. Through various tasks, I learned to use digital tools, create a professional online presence, communicate effectively, and protect myself online. It also enhanced my practical skills and confidence in using different platforms. Overall, this project was a valuable learning experience that will support me in my academic journey and future career.
